SANI

PROBLEM/ SOLUTION OVERVIEW

- The main problem that users have is that they aren't able to understand how a job is done and if they would like it before finding a real job. So that, they spend a lot of time on finding the right job for them.
- As possible solution they need to have more experiences on short term jobs to better understand if a kind of job is suitable for them.

TASK AND STORYBOARD

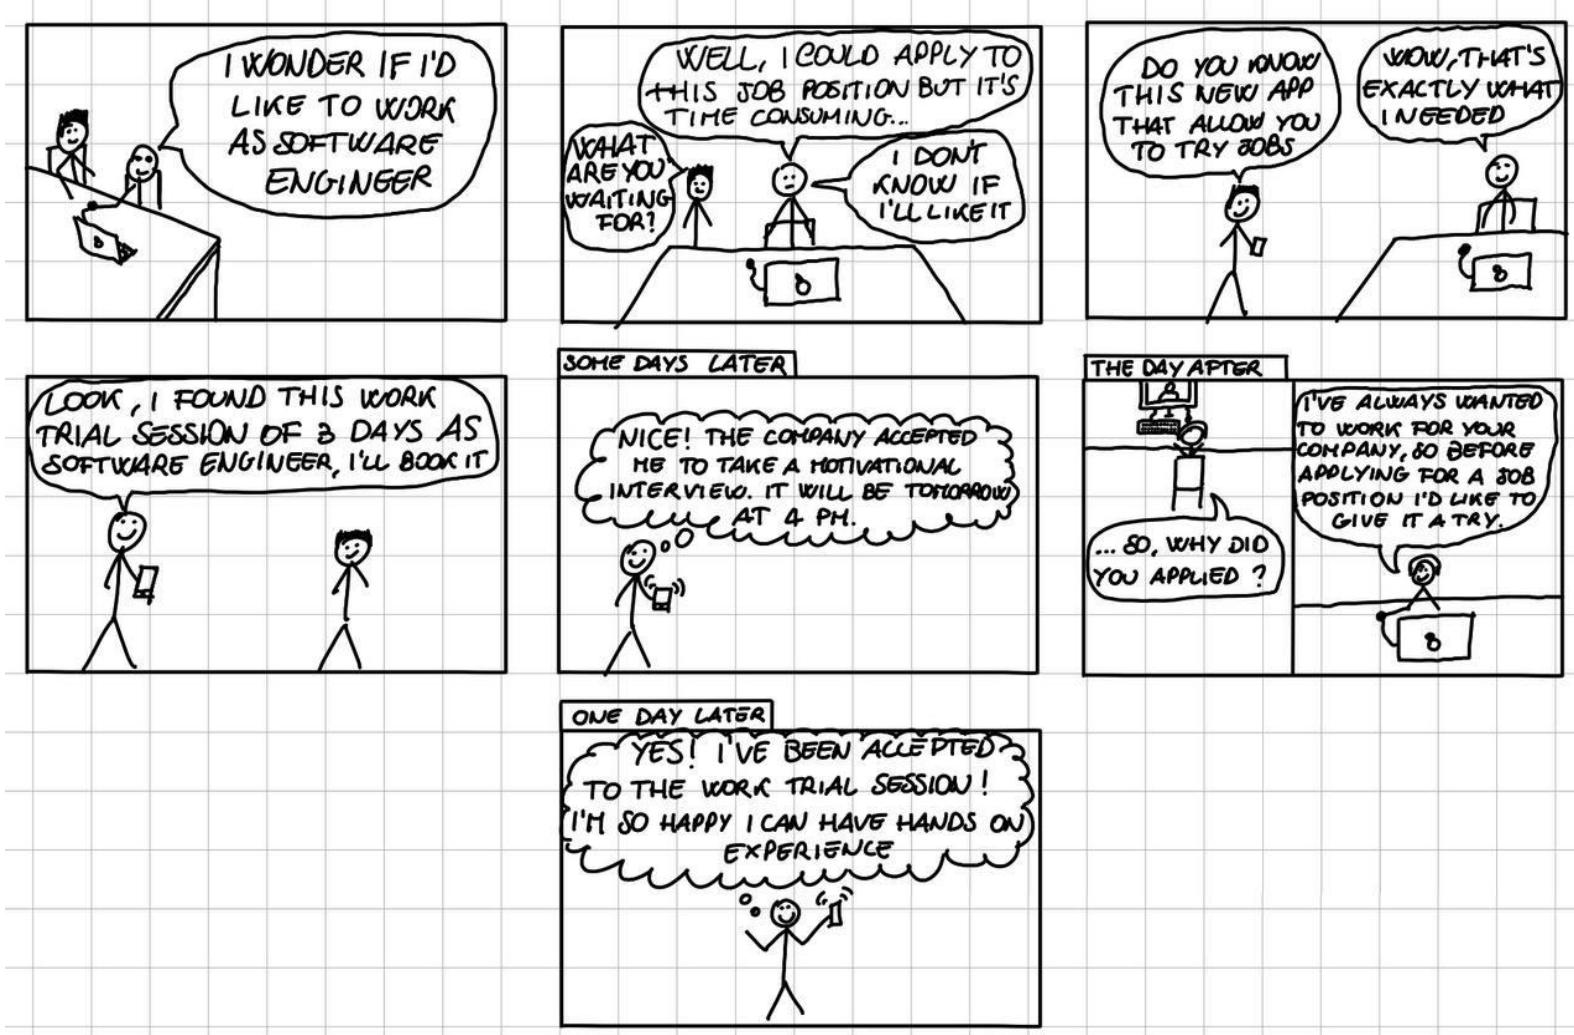

TASKS:

- Simple Task:
 - Applying to “work session”, an event/chance to experiment a job for a limited amount of time
- Moderate Task:
 - Take part in a motivational interview after being considered for the work session
- Complex Task:
 - Ask for additional professional feedback from company employees you work with during the session

STORYBOARD:

- Our choice was based on its ability to illustrate the user's perception of a problem and how our application can transform challenges into opportunities.
- A notable strength lies in its capacity to highlight the challenges faced by unemployed individuals entering the workforce and how our solution efficiently aids them.
- However, a weakness is that it solely reflects the perspective of the individual seeking employment and does not encompass the viewpoint of the company.

MODALITIES EXPLORATION

SPEECH

- Good for the relationship part, where the unemployed meets and work with a company
- Good for receiving feedback
- Bad for the searching part where the user has to find the "just work" experience
- Bad for just remote experiences

SMARTPHONE

- Good for the relationship part, where the unemployed meets and work with a company
- Good for receiving feedback
- Good for the searching part where the user has to find the "just work" experience
- Good for remote and on site experiences
- Good for having access to the application from wherever the user is
- Good because every young person has a personal smartphone

COMPUTER

- Good for the relationship part, where the unemployed meets and work with a company
- Good for receiving feedback
- Good for the searching part where the user has to find the "just work" experience
- Good for remote and on site experiences
- Good for having access to the application from wherever the user is
- Bad because not every young person has a personal computer

SELECTED ALTERNATIVES

- **Smartphone**
 - This could be the most used way that the young person will use.
- **Computer**
 - It can be a good alternative to the smartphone because it is better for participating online work sessions

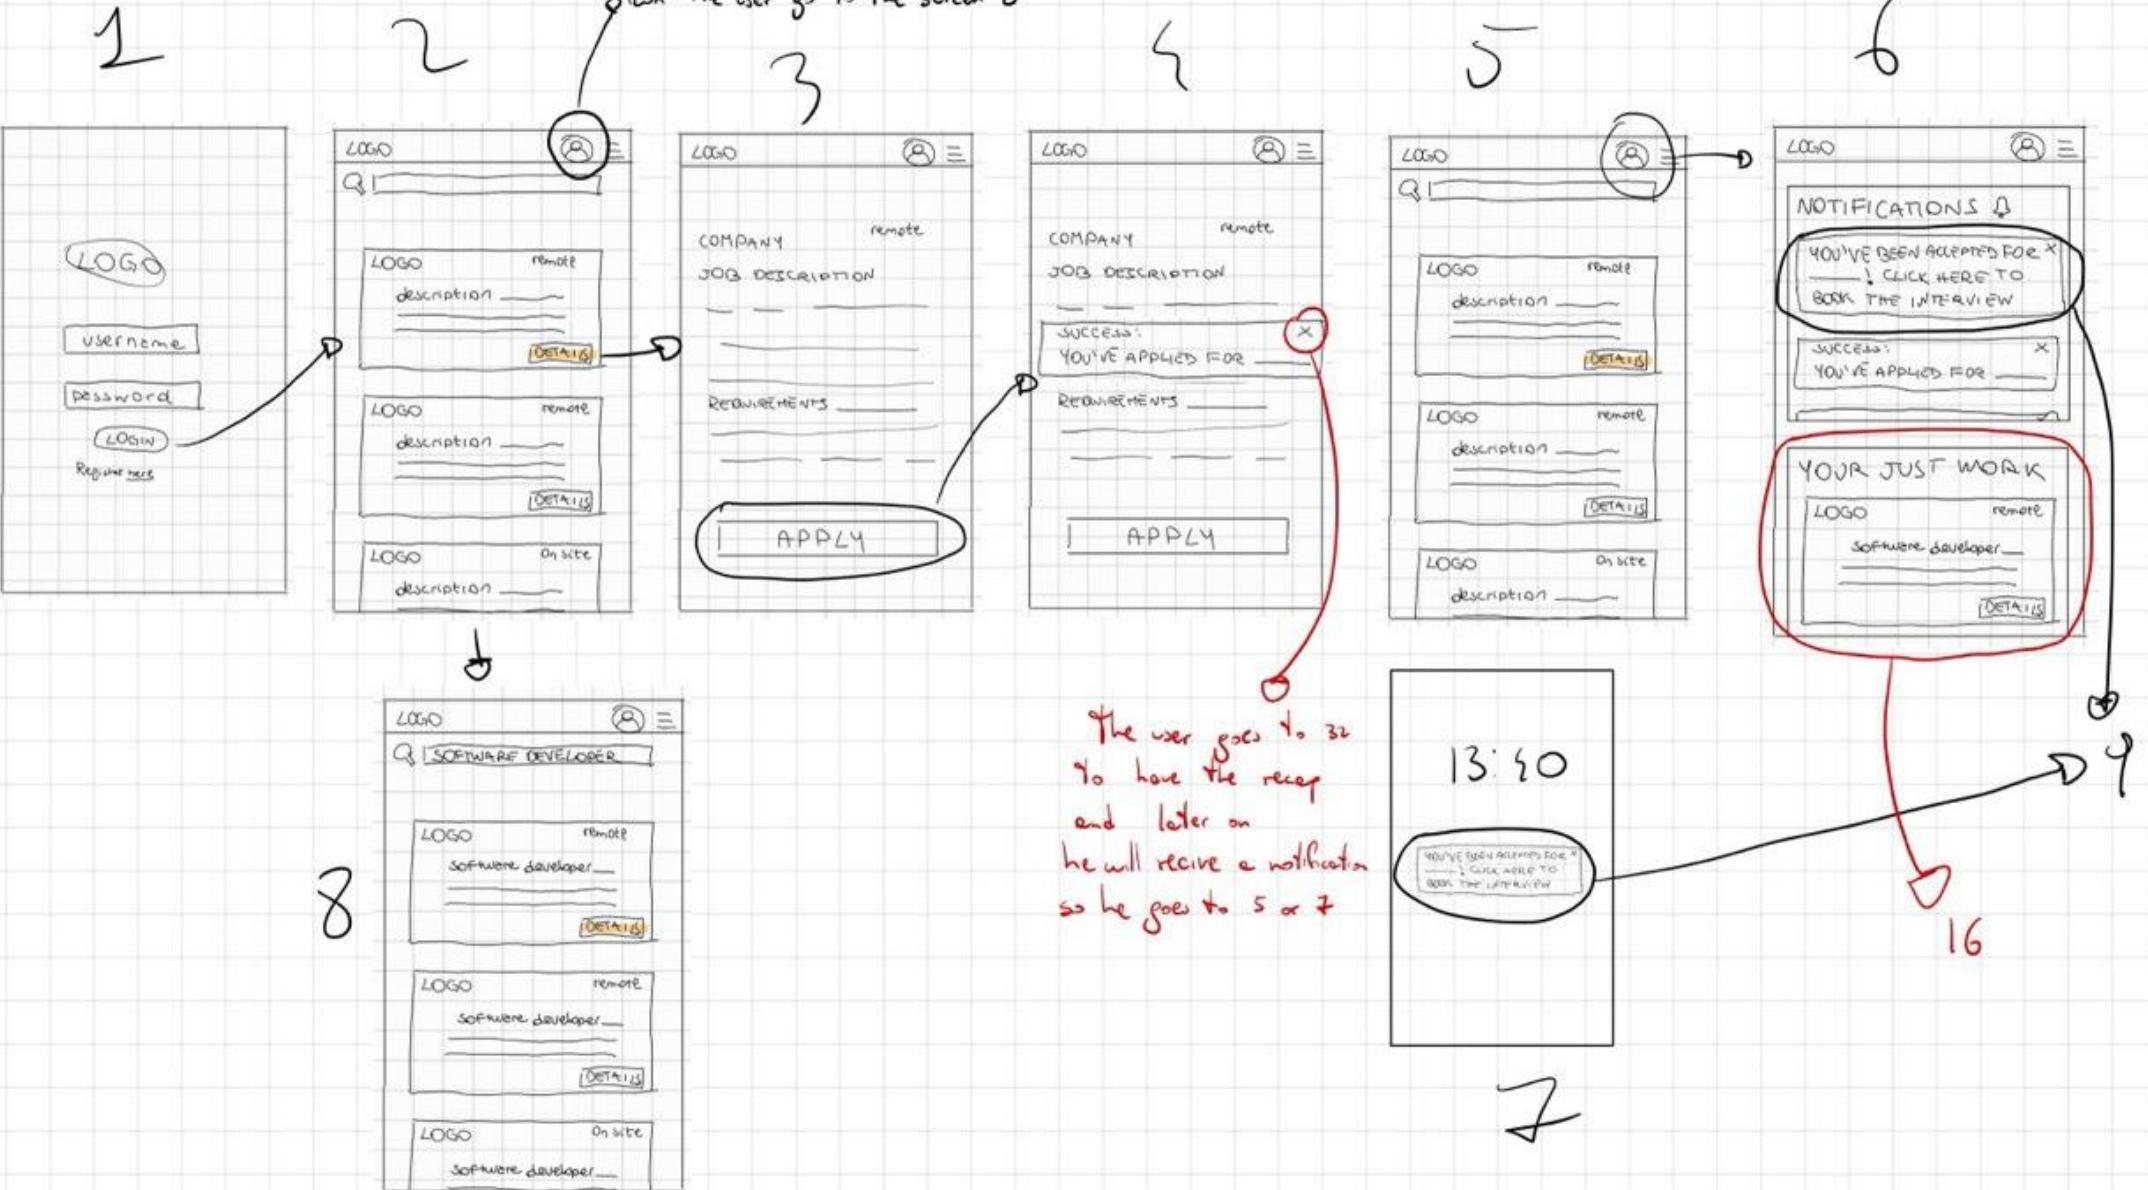

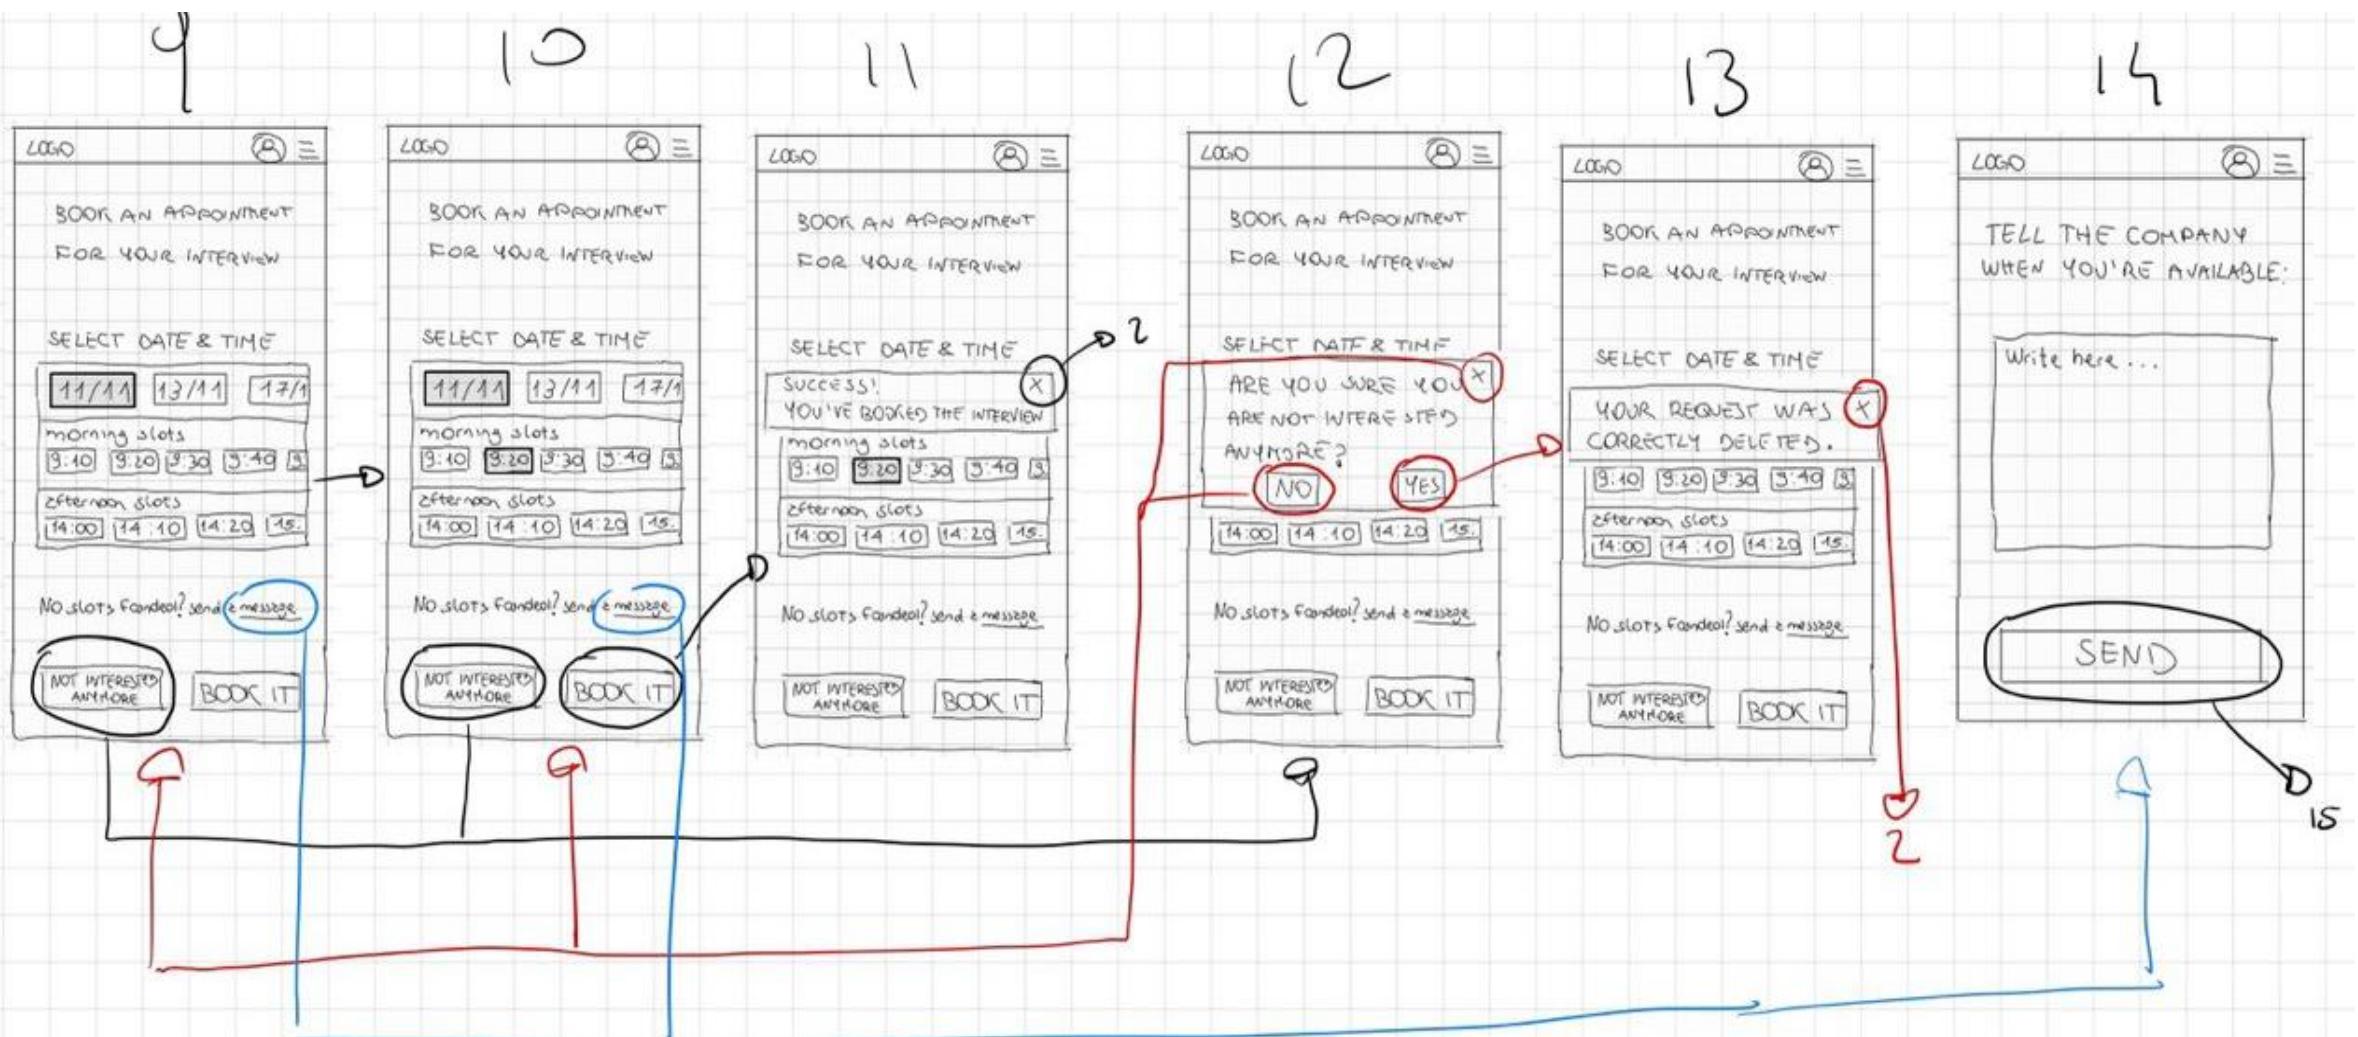

PROTOTYPE NUMBER I

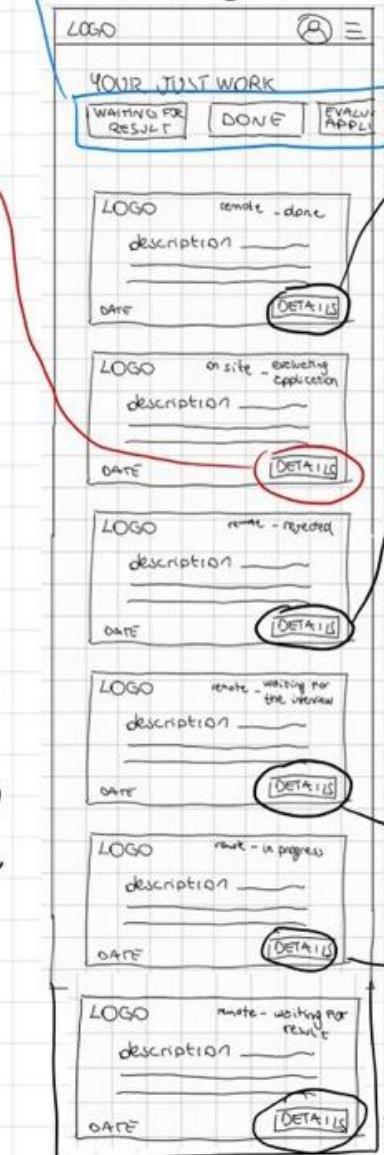

DESCRIPTION OF THE JOB APPLICATION'S STATE

- When the user applies for a "**just work**", the application will have the state "**evaluating application**". If he will not be accepted the state will be "**rejected**", otherwise it will be "**waiting for interview**". When he will book the interview, the state will not change. After attending the interview, the state will be "**waiting for result**". If he will not be admitted, the state will be "**rejected**", otherwise it will be changed into "**in progress**". When the work experience will be ended and the company upload at least one feedback, the state will be "**done**".

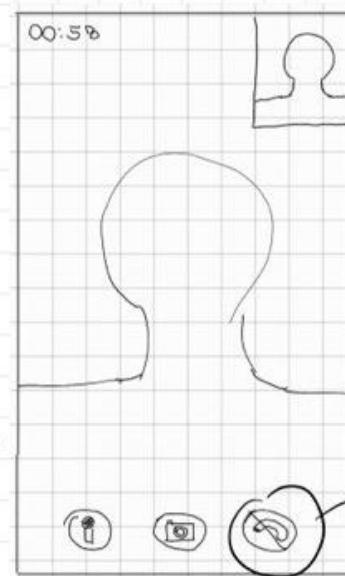

clicking on one or more filters the user will see the list filtered

The user can go to 22 or 23. It depends on if the user was rejected before or after doing the motivational interview

If the we have already
booked the interview he
goes to it, otherwise 7:32

→ 25, if the job
is on site it will go
+ 25

HOW DOES IT CONNECT TO STORYBOARD AND THE THREE TASKS

- It is linked to the **Storyboard** as users, upon logging in, can browse and select job applications of interest, read their descriptions, and submit applications. If the company approves the candidate, they can then participate in a motivational interview within the application.
- Regarding the **three tasks**, users have the ability to search for preferred job advertisements, submit applications, participate in job interviews through the application, and monitor the various states of their applications. Additionally, users can engage in remote work sessions through the application. Upon completing this experience, users can review feedback provided by the company and, if desired, request additional details..

PROTOTYPE NUMBER 2

DESCRIPTION OF THE JOB APPLICATION'S STATE

- When a user submits a "**just work**" application, the initial state is "**evaluating application**." If the application is unsuccessful, the state becomes "**rejected**"; otherwise, it transitions to "**waiting for interview**." After scheduling and attending the interview, the state remains unchanged. Post-interview, it shifts to "**waiting for result**." If the outcome is negative, the state becomes "**rejected**"; otherwise, it advances to "**in progress**." Upon completion of work experience, accompanied by at least one uploaded feedback from the company, the final state is "**done**."
